Omegon® 6x30 finder scope, black Product no.: 48374

Omegon® 6x30 finder scope, black - provides an upright, non-reversed image
Product no.: 48375

Please note for a precise focusing:

In some cases it might be necessary to adjust the objective's position significantly to achieve sharp images for very distant objects. If you notice that you do not get the desired sharpness in the original position (1) or after the first few rotations, just continue rotating the objective cell moving it further away (2), if necessary close to the end of the tube's thread (3). At least then, you should be able to achieve a complete and precise sharpness in the entire field of view. Subsequently, all you have to do is fix this position with the locking ring (4).
